

**Amendment to the Claims:**

The listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

Claims 1-8 cancelled

9. (Currently Amended) An operable device to be used in a vehicle, comprising:

an operating panel through which a user can cause at least one of producing existing operating states or changing existing operating states of the operable device; and

CI a decision unit, coupled to the operating panel, which receives data for determining vehicle-specific conditions over a time period of vehicle operation by evaluating the received data and converts the vehicle-specific conditions into a driving profile indicating an actual driving situation of the vehicle and blocks or releases the existing operating states of the operable device based on according to whether the actual driving situation is dangerous or non-dangerous on a basis of the driving profile.

10. (Previously Presented) An operable device to be used in a vehicle, comprising;

an operating panel through which a user can cause at least one of producing existing operating states or changing existing operating states of the operable device; and

a decision unit, coupled to the operating panel, which receives data for determining vehicle-specific conditions by measuring fluctuation of a driving speed of the vehicle over a time period and blocks or releases the existing operating states of the operable device based on the measured fluctuation.

11. (Previously Presented) An operable device according to claim 9, wherein the operable device is operable to perform at least one of receiving or transmitting data.

12. (Previously Presented) An operable device according to claim 10, wherein the operable device is operable to perform at least one of receiving or transmitting data.

13. (Previously Presented) An operable device according to claim 9, comprising:

equipment which collects information on at least one of conditions or states under which or by which the operable device is currently being operated, and transmits the information as data to the decision unit.

14. (Previously Presented) An operable device according to claim 10, comprising:

equipment which collects information on at least one of conditions or states under which or by which the operable device is currently being operated, and transmits the information as data to the decision unit.

15. (Previously Presented) An operable device according to claim 11, comprising:

equipment which collects information on at least one of conditions or states under which or by which the operable device is currently being operated, and transmits the information as data to the decision unit.

16. (Previously Presented) An operable device according to claim 12, comprising:

equipment which collects information on at least one of conditions or states under which or by which the operable device is currently being operated, and transmits the information as data to the decision unit.

17. (Previously Presented) An operable device according to claim 9, comprising:

a receiving unit; and wherein data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

18. (Previously Presented) An operable device according to claim 10, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

19. (Previously Presented) An operable device according to claim 11, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

20. (Previously Presented) An operable device according to claim 12, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

21. (Previously Presented) An operable device according to claim 13, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

C1  
22. (Previously Presented) An operable device according to claim 14, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

23. (Previously Presented) An operable device according to claim 15, comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision unit to be used alone or together with other data to control the blocking of the operating states or releasing of the operating states of the operable device.

24. (Previously Presented) An operable device according to claim 16,  
comprising:  
a receiving unit; and wherein  
data is received by the receiving unit and is transmitted to the decision  
unit to be used alone or together with other data to control the blocking of the  
operating states or releasing of the operating states of the operable device.
